NEXT GENERATION NEEM

CLARIFICATION OF TRUNK INJECTION USE RATES*

*The attached information is taken from the AzaSol label, but is not meant to be a supplement, nor does it replace the label. You must read the entire AzaSol label.

Application Equipment:

AzaSol may be used with the Arborjet tree Injection Systems or with other tree injection devices that meet the label requirements. For all injection systems, read carefully and follow the manufacturer's direction for use.

PALM INJECTIONS:

In palms, only one injection site is generally required.

1. Locate the application site 1-3' (30-90 cm) from the soil level.
2. Drill depth is 1/3 the total diameter or 4" (10 cm) deep into the stem (whichever is less).
3. Refer to table: Use Rate Recommendations for Palm Injection for dosages to apply.

TREE INJECTIONS:

1. Inject 4 mls of solution every 6" (15 cm) of stem circumference in trees <8" DBH (20cm).
2. Inject 6 mls of solution every 6" (15 cm) of stem circumference in trees 8-16" DBH (15- 40cm).
3. Inject 8 mls of solution every 6" (15 cm) of stem circumference in trees >16" DBH (>40cm).
