# Landscaping Management

*The preferred resource  
for large contractors*

A close-up photograph of several bright green, healthy leaves on a dark brown branch, set against a blurred background of a blue sky and white clouds.

## The winter *(and spring)* of our discontent

For the second straight year, unusual weather gave us an extremely challenging start to the season.

## Arborjet

ACE-jet is a micro-injectable, broad-spectrum “fast-acting” insecticide used for the management of insects that ravage forests, trees, landscape ornamentals and interior plantscapes. It eliminates leaf-chewing insects such as caterpillars, winter moth, gypsy moth and webworm; piercing-sucking insects such as whiteflies, adelgids, aphids, spider mites, scale, thrips and mealybugs; and mining insects such as leafminers

and sawflies. Beneficial insects, including wasps, soldier beetles and assassin bugs, are not affected by ACE-jet since it is injected directly into a tree’s trunk and only impacts insects that are feeding directly on the tree. [Arborjet.com](http://Arborjet.com)
