

THE NEXT GENERATION OF TREE I.V. HAS ARRIVED

FSERIES TREE I.V.

FAST

First ever 120 PSI injection system

EFFICIENT

Lightweight and easy turn valves allow for total control

RELIABLE

Hex PDS Technology distributes product evenly to parallel injection lines

FLEXIBLE

1.5L or 650mL - Choose the right bottle for your tree

EASY FILL

Quickly add product without removing cap

PRODUCTIVE

Maximize output with 6 lines, or use 12 with the built-in expansion system

FSERIES KITS

F12 Kit - (070-0055)

F12 Pro Kit - (070-0058)

WHAT'S THE DIFFERENCE?

FSeries

120 psi
1.5L & 650ml Bottles
6 line system
Built-in expansion for 4-12 lines

TREE IV

60 psi
1L Bottle
4 line system
Add-on expansion for 4 or 8 lines

HEX PDS PARALLEL DISTRIBUTION SYSTEM

The Hex PDS parallel distribution system uses a central delivery tube which distributes equally to parallel injection lines, ensuring the tree receives an even dose every time. Injection systems connected in a series put more product in the first line than the last, resulting in uneven distribution. It also allows you to inject your tree with 4, 5, or 6 lines at a time, or maximize output and add the included expansion set for up to 12 injection hoses, allowing you to complete large trees with just one bottle.
