

## FLOW RATE METER

### AccuFlo

Knowing how much you're spraying or drenching can be tough for landscapers and homeowners. Arborjet's AccuFlo Flow Rate Meter does all the math, making it easier than ever to get professional results without spending pro money.

Easy to use and offering consistent, repeatable results, the AccuFlo represents a shift in the way we apply fluid nutrients, pesticides and fungicides in the landscape.

Made from 3D printed carbon fiber, the AccuFlo is durable, but so light you'll forget you're wearing it. The AccuFlo works best on constant flow rate devices, so we recommend a battery pack sprayer for premium results.

### Why Use AccuFlo?

- Saves time and money by eliminating waste and guesswork
- You can quickly and easily make multiple treatments on different types and sizes of plants
- Use the AccuFlo to precisely apply fertilizers, moisture management solutions, plant growth regulators or water soluble insecticides and fungicides
