

Shortstop® 2SC

PLANT GROWTH REGULATOR

SYSTEMIC PLANT GROWTH REGULATOR FOR TREES & SHRUBS

Shortstop® 2SC

(22.3% Paclobutrazol)

Shortstop 2SC is a systemic plant growth regulator that slows above ground vegetative growth in trees and shrubs.

Effective for: Slowing growth, reducing pruning frequency, reducing drought stress, reducing construction damage, enhancing fine root hair growth, and increase overall appearance.

- 040-1100 1 Gallon*
- 040-1110 1 Gallon Case of 4
- 040-1120 1 Gallon - Tree & Shrub*
- 040-1125 1 Gallon Case of 4 - Tree & Shrub

**1 Gallon makes 12 gallons of diluted mixture*

Why Use Shortstop 2SC?

Shortstop 2SC may now be used for both trees and shrubs. It slows above-ground vegetative growth by inhibiting gibberellin biosynthesis. Results last longer when applied to the soil near the base of the tree or shrub by soil injections or with a basal soil drench. Foliar applications may also be applied to shrubs. Shortstop 2SC benefits your trees and shrubs by redistributing energy to increase root production, altering leaf physiology to reduce water vapor loss, and increasing the production of chlorophyll to aid in the process of photosynthesis.

- Less time spent shearing & shaping
- Reduces debris & disposal costs
- Reduces pruning frequency
- Increases drought resistance
- Increase disease suppression
- Improved appearance

Regulates growth of...

Elm

Maple

Oak

Boxwood

Burning Bush

Rhododendron

...and More!

ARBORJET®

Results

Studies performed at Michigan State University have shown Shortstop (now branded as Shortstop 2SC*) to aid in tree survival and halt defoliation during water shortage due to severe drought. 80% suppression in plant growth was reported, and shrubs that were treated with Shortstop only needed to be pruned once per season, as opposed to untreated shrubs, that needed pruning 2-3 times per season. Treating with Shortstop 2SC can cut labor costs from manual pruning, saving time and money for businesses that provide pruning services.
