

SAVE YOUR TREES FROM CHLOROSIS

Treat For Nutrient Deficiencies Now!

If you notice the color of your trees' leaves fading to a pale green or yellow hue, they may be suffering from **Chlorosis**. Often caused by iron and manganese deficiencies, the disorder will cause slow growth, leaf loss, and eventually tree death if allowed to progress. A trunk injection of Mn-jet Fe will make these essential minerals immediately available for use by the tree to enhance health, growth, and development.

Mn-jet Fe™

Why inject for Chlorosis?

- Turn those yellow leaves green in 2-4 weeks
- Results last up to three years
- Treat from spring through fall
- Ensure nutrient availability with a direct application
