

SAVE YOUR TREE FROM EMERALD ASH BORER!

The Emerald Ash Borer (EAB) is an invasive pest that will kill any untreated ash trees.

Why use the Arborjet® Tree Injection Method?

- ✓ Unlike spraying or soil drenching which put chemicals in the air and ground, Arborjet's injection puts all product inside the tree during application.
- ✓ We have up to 2 years proven control of EAB.
- ✓ No other injection method has the proven results against EAB like we do.
