

IF I WERE A PINE BARK BEETLE

**I WOULD BE  
SHAKING  
IN THESE!**

We now offer Arborjet trunk injection for 2 years of protection against Pine Beetle, with only 1 application.

**Call Us Today!**

**Save your pines & say "See Ya" to Pine Beetles**

card here

# Did You Know?

Unhealthy or stressed trees are the most likely to be attacked.

Pine Beetle epidemics quickly start attacking otherwise healthy trees.

Once a tree starts to show symptoms of attack...it's too late. So treat proactively.

## Why We Use Arborjet's Trunk Injection

- **Effective Results:** Arborjet's trunk injection can protect your trees for up to 2 years with one application.
- **We Value the Environment:** The product is sealed in the tree away from the environment. Nothing in the air, nothing in the soil.
- **Proven:** Trunk injections have been proven in a number of university trials to be an effective way to treat.

Arborjet is used by the USDA Forest Service and is the leading product in University studies.

## Treatment is Effective!

You can treat in sensitive areas like parks or near water.

Once injected, the product travel throughout the tree's transport system and your tree is protected!
