

## TREE INJECTION

# AMP I.V.<sup>™</sup>

## High-Volume Injection

Engineered for efficiency, the AMP I.V.<sup>™</sup> system is a high-capacity tree injection kit developed to streamline large-scale treatments. Built on a battery-powered, 9-gallon rolling trolley, the unit is easy to transport between trees, making it ideal for high-volume tree care operations.

With adjustable pressure settings ranging from 7 to 115 PSI, the AMP I.V. can deliver applications across tree species and treatments. Its closed delivery system minimizes the risk of external contamination.

AMP I.V. comes with three extension kits for a total of 18 lines, which deliver formulation simultaneously across multiple injection points. The unit's combination of capacity, mobility and adjustable pressure equips users with maximum versatility for large-scale jobs—allowing tree care professionals to adapt seamlessly from project to project.

### PRODUCT APPLICATIONS

Beech Leaf Disease

Oak Wilt

Dutch Elm Disease

Bur Oak Blight

Sycamore Anthracnose

### TREATMENT CAPACITY

One tank treats up to a 33" tree using Propizol macro infusion rates

## KEY KIT CONTENTS\*

Kit Number 070-2600

1 FlowZone 9-Gallon Roller Tank

3 FSeries Expansion Kits

1 Adapter Assembly

1 TREE I.V. Tool Kit

Adapter Kit for existing FlowZone®  
sold separately - 070-2650

\*Visit our website for a full list of kit components

## PRODUCT BENEFITS

### FLOWZONE® ROLLER TANK

9-gallon capacity,  
moves easily  
between trees

### BATTERY- POWERED

18V/5.2Ah  
rechargeable  
battery

### CLOSED SYSTEM

Sealed device avoids  
contamination  
during treatment

### VARIABLE PRESSURE

Allows injections  
between 7 and  
115 PSI

### ARBORPLUG COMPATIBLE

Enables faster,  
higher-pressure  
injections

### PARALLEL DISTRIBUTION

Hex PDS® delivers  
formulation across  
multiple injection  
points (up to 18 lines)
