

TREE INJECTION

TREE-äge® G5

Systemic Injectable Insecticide

TREE-äge G5 is an innovative solution for integrated pest management, dramatically reducing application times and providing enhanced, long-lasting protection for urban forests.

TREE-äge G5 contains a 5% concentration of emamectin benzoate, offering two years of insect control. By encouraging faster uptake, the new formulation improves overall efficiency, reducing product requirements per tree and time spent on site.

The product requires no mixing, and the bottle can be directly attached to Arborjet equipment. The general-use label eliminates needs for additional licensing in most states.

With a 5% formulation, TREE-äge G5 provides a higher level of performance that supports both tree health and business efficiency for tree care professionals.

EFFECTIVE AGAINST

Emerald Ash Borer

Southern Pine Bark Beetle

Round & Flat-Headed Borers

Ambrosia & Bark Beetles

Tent Caterpillars

Worms

Moths

Weevils

Leafminers

Stem Gall Wasps

SIZES

1 Pint — 040-4150

**1 Pint treats up to 24 trees (10" DBH) at the low rate*

TREE-äge G5

PRODUCT BENEFITS

INGREDIENTS

5.0% Emamectin Benzoate

RESULTS

TREE-äge G5 has shown efficacy in suppressing borers beetles, caterpillars, moths, worms, leafminers and more. For best results, proactive treatment early in the year or late in the fall is recommended.

GREAT FOR USE ON THESE

DECIDUOUS

EVERGREEN

PALM

SYSTEMIC

Moves throughout the tree via trunk injection

EFFICIENT

Encourages faster uptake & less time per site

VERSATILE

Connects directly to Arborjet equipment, no mixing required

GENERAL USE

No special licensing required in most states

BROAD-SPECTRUM

Protects against a wide variety of insects

LONG-LASTING

Provides two years of control
